

#Meeting Agenda

Group: 20

Date: 28/10/18

Chair: August S

Secretary: Henrik T

Participants: August S, Henrik T, Hampus E, Anthony T

Objectives (5 min)

Discuss the final result.

What went well?

What would we do with more time?

Report

- Henrik has been writing on the final report.
- Anthony has been writing on the final report.
- Hampus has been writing on the final report.
- August has been writing on the final report.

Discussion items (35 min)

Discuss the final result.

- functionality
- structure/design
- tests
- report

What went well?

- users experience
- mvc
- design

What would we do with more time?

- separate functionality
- perfect the report

Outcomes (5 min)

Discuss the final result.

- The application has quite a bit of functionality and we are happy with the amount. There are still user stories that we thought of which aren't implemented but they are not vital. The structure and design is good but there are small improvements that would make it alot better. By separating the functionality within the ImageModel and adding abstractions we could make the program more extendable. This would be good when adding new functionality since

it isn't easy enough to do at this moment. We have a decent amount of test coverage since we use property based testing. This helps us cover more by writing less. We feel like we could improve the final report further. Unfortunately our time management got disturbed in the final week due to issues outside of school.

What went well?

- We are really happy with the user experience. We feel like the program is easy to use and also quite valuable relative to the amount of time given. The program looks good and it's solid in terms of bugs. The amount of work that each individual has put in is equal and there has not been much conflict. We have managed to follow mvc and the model is completely separated from the rest of the program.

What would we do with more time?

- As mentioned earlier we would reformat the model. This is something that we have been talking about throughout the project but didn't dare to do because of the timeframe. There are changes which are very minor relative to what it would mean for some classes independence. It should be easier to add a new tool for example. We feel like the report could be improved further but it was very time consuming since we didn't get a clear picture of exactly what to improve.
