

## **#Meeting Agenda**

Group: 20

Date: 29/09/18

Chair: Henrik

Secretary: August

Participants: August S, Henrik T, Hampus E, Anthony T

### **## Objectives (5 min)**

Discuss how to divide the java-classes into modules.

Delegate tasks in order to increase the code quantity.

Discuss how to move forward with the SDD.

### **## Report**

A bucket-fill tool has been implemented by Henrik. Part of the "layer-GUI" and functionality for a single layer has been implemented by Anthony.

The next step is to apply the same functionality for more layers. August has written a test for the pencil tool, done some formatting and created an eraser tool. Hampus has been working on save/load functionality.

### **## Discussion items (35 min)**

Discuss how to divide the java-classes into modules.

- Focus on making every part replaceable
- Model, view, controller, services, resources

Delegate tasks in order to increase the code quantity.

- Complete more user stories
- One each until next meeting

Discuss how to move forward with the SDD.

- Each member writes one part in the coming week

### **## Outcomes and assignments (5 min)**

Discuss how to divide the java-classes into modules.

- The task in itself is easy, although while doing this we need to think about the fact that every module needs to be independent and replaceable. This means that it might come with a bit of refactoring.

Delegate tasks in order to increase the code quantity.

- Each member needs to complete active stories as far as they can and pick one user story for the next meeting. We also need to work on tests since they are lacking in quantity. Remember to do "random-testing".

Discuss how to move forward with the SDD.

- Each member writes a part of it during the coming week. We will however prioritize coding since we are behind in code quantity.

## **## Wrap up**

Unsolved issues for next meeting:

- Did we catch up?
- If not, what do we need to prioritize?

Next meeting: Wednesday 3/10-2018
