#Meeting Agenda

Group: 20
Date: 18/09/09
Chair: Henrik
Participants: August S, Henrik T, Hampus E, Anthony T

Objectives (5 min)

Assign individual group roles/responsibilities and write a group contract
GUI, prototyping
UML
RAD

Report
The meeting with our supervisor gave insight into how we should structure
both the working process as well as our group.
We concluded that a group-contract is suitable to further decrease the
possibility of internal conflict. We also received instructions on how to
individually contribute without creating confusion or errors (usage of
travis etc). The first tasks to tackle will be related to the
applications structural design as well as â€œlogisticsâ€•.

Discussion items (35 min)
Develop a broader understanding of git and gradle
Discuss individual group roles/responsibilities
GUI, prototyping

Outcomes and assignments (5 min)

On monday, 10/9, we will construct a group contract
In the coming week we will start creating a prototype-uml and RAD
We will continue to contribute with more user-stories and tasks

Wrap up
For next meeting: Follow-up the discussion items and affirm that the
overall progress is moving at the right pace. If not discuss how we can
become better at setting up clear tasks for each individual.

Next meeting: Tuesday 11/9
