#Meeting Agenda

Group: 20
Date: 07/10/18
Chair: August S
Secretary: Henrik T
Participants: August S, Henrik T, Hampus E, Anthony T

Objectives (5 min)
Discuss current state of the application and what to focus on.

Report
- August has been working on line tools and testing however the tasks are not yet completed.
- Henrik and Anthony has started to implement a select tool. Anthony is still working on layers.
- Hampus reverted a previous decision to move large parts of the code. He also finished the undo buffer as well as the opacity. implementation, which now works as intended.

Discussion items (35 min)
Discuss current state of the application and what to focus on.
- Move forward with SDD
- Rearrange classes
- Create packages
- Implement property tests

Outcomes and assignments (5 min)
Discuss current state of the application and what to focus on
- One thing that needs to be updated is our SDD. We also need to make sure that our current implementation is in line with our vision to make an extendable application. We are also lacking tests but this is being worked on currently by August. The application needs to be divided further, we are still lacking packages.

August will continue working on line tool and testing.
Henrik will continue working on select tool.
Hampus will continue implementing load and save features.
Anthony will continue working on layers. To make layers arrangeable.
Everyone has to contribute to the SDD.

Wrap up
Unsolved issues for next meeting:
- N/A

Next meeting: Wednesday 10/10-2018
